INSTRUCTIONS

1. Download the template for the file format you would like to use
2. Create your label using the template
3. Put the label paper in the printer and print
4. See the "printing tips" below for helpful suggestions

PRINTING TIPS

• We suggest printing the removable white matte in the "Auto/Unspecified" material type within your printer settings.

• Storing label sheets in the printing environment for a short period before attempting to print, allows them to adjust to any temperature changes and stabilize after shipping, which may prevent common printing problems.

• Before you print onto label sheet, first print onto a blank piece of paper. Place the sheet behind the label, and then hold the sheets up to a light to make sure the positioning is correct.

• Before and after printing, handle label sheets by the edges of the sheet being careful not to get oil from your fingers on the printable removable matte surface. Oil may cause smudging.

• Allow label to dry completely before stacking, handling or peeling the printed label sheet.

• If you experience any smearing during printing in a laser printer, we suggest selecting the "Labels" material type in printer settings.

• If you are experiencing any smearing during printing in an inkjet printer, we suggest lowering your DPI or quality setting.

• Our standard white matte removable label material is a bright white material with a removable adhesive. The removable labels can be applied to most surfaces and easily removed without leaving any adhesive residue behind.

• Labels printed on an inkjet printer may run if immersed in water, or if the bottle "sweats". To avoid this, use a laser printer, or use a copier to print onto the labels.
